

Ham Radio Emergency Communications (Emcomm)

Ham Radio Emergency Communications (Emcomm)

- After Action Report from an EMA at a Hurricane 'Near Miss'
 - Nearly every Field Representative complained
 - Could not get needed information
 - Could not disseminate information
 - Yet, not a single Comms system failed
 - Radios, cell phones, Internet – all operational
- What happens in a real emergency when normal comms fail?
- Hams can help

Ham Radio Emergency Communications (Emcomm)

- Hams provide supplemental communications when disaster destroys or significantly damages normal communications systems
- Hurricane Katrina as one example -
 - 37 of 41 Radio/TV stations off air, some for months
 - Thirty-eight 911-call centers down, some for weeks
 - 20 million phone calls dropped/blocked day after storm
 - New Orleans Police communications system failed for three days
 - Mississippi Nat. Guard Comms reduced to “Runners”

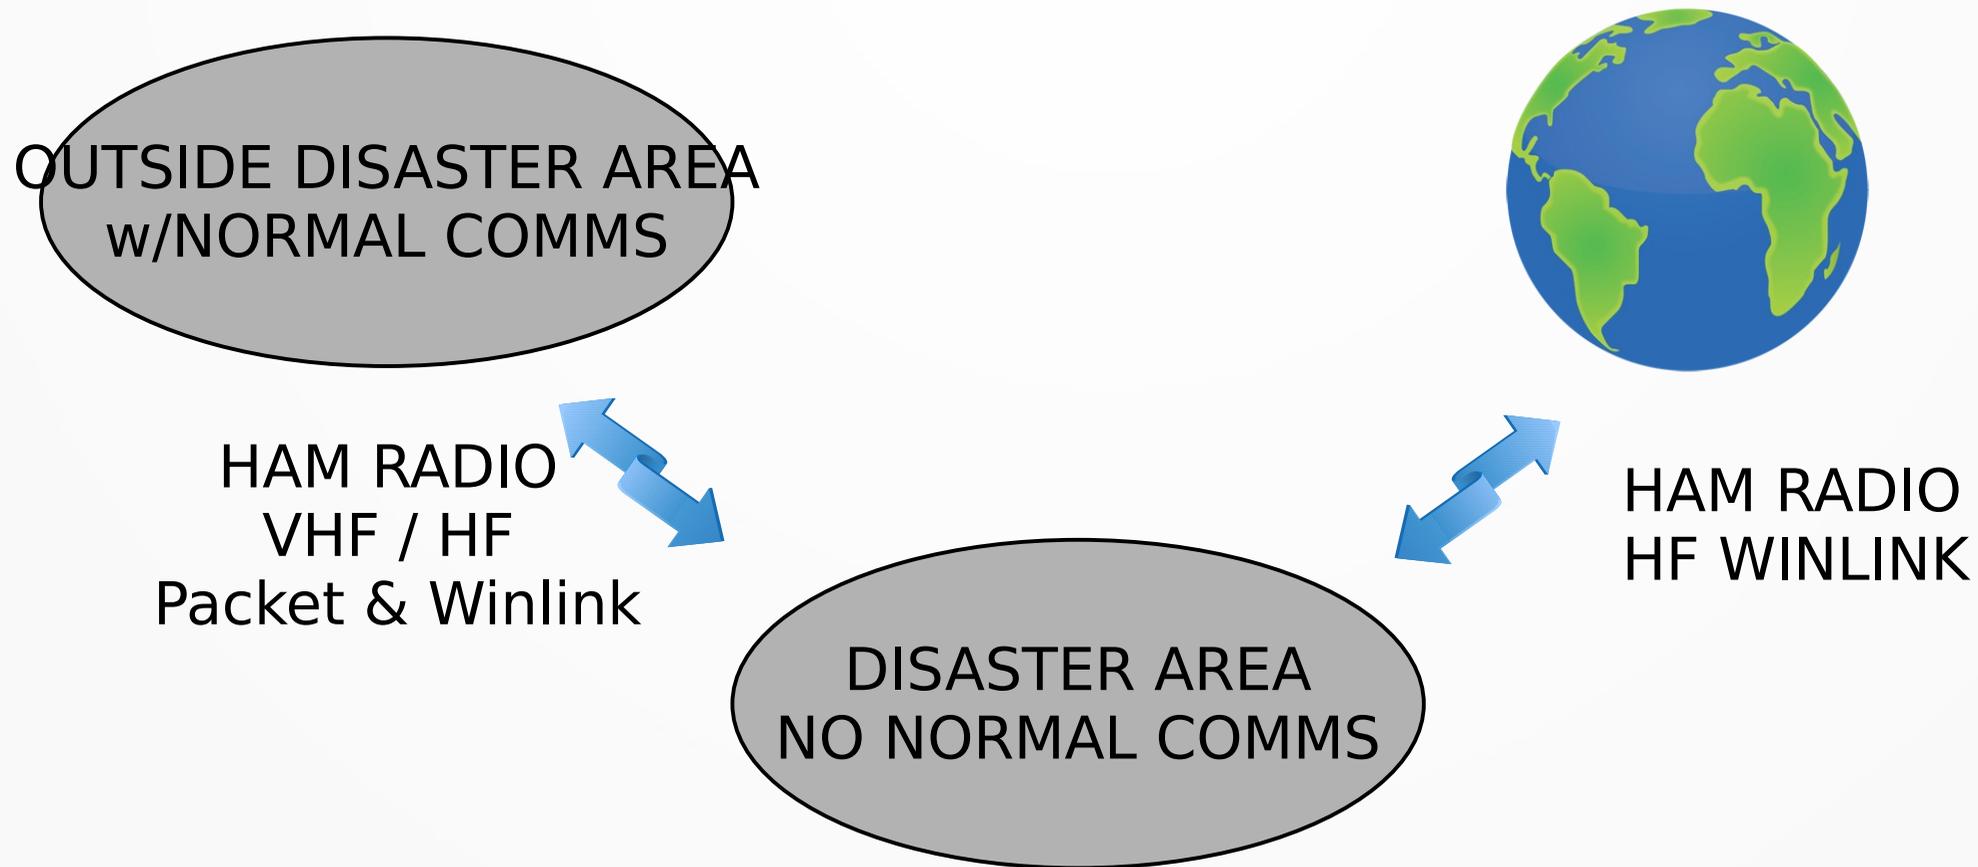

Ham Radio Emergency Communications (Emcomm)

- Hams are **NOT** First Responders !
- Hams may not be Second or even Third Responders
- Hams provide back-up or supplemental communications at the direction of EMA - Disaster/Incidents
- Hams work under direction of County EMA Director
- Hams are licensed, vetted & trained
 - Tactical Communications: Voice & Digital
 - FEMA ICS / NIMS / AUXCOM
- May provide Comms for other Public Events - Parades, Walk-A-Thons, Biking/Cycling

Ham Radio Emergency Communications (Emcomm)

- Voice communications has limits
 - Great for tactical communications - short messages
 - Slow & Error prone for detailed lists - Data entry at reception point
- Digital Modes Significantly Increases Throughput
 - Data entry at origin- less error
 - Complex, High Volume messages
 - Files, Lists, Spreadsheets, Databases
 - Transmit, Log, Date-stamp & Print - much faster than voice
 - Provides Internet-like eMail via Radio

Ham Radio Emergency Communications (Emcomm)

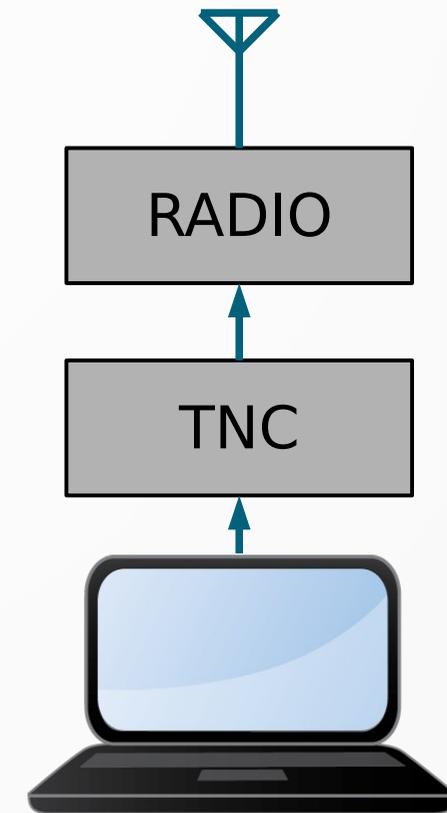

Ham Radio Emergency Communications (Emcomm)

- What is Packet Radio ?
 - A method to send digital messages and files over a standard voice channel
 - Faster messaging than Voice and Error free
 - Emulates binary data by sending two audio tones
 - 1200 baud - Slow by comparison to today's Internet
 - Packet "NODES" - provide routing and networking
 - Amateur Packet Radio standard (AX.25) derived from an early Bell protocol redesigned for a Radio Channel
 - Packet of Data - Frame = Address header, Data Payload, CRC

Ham Radio Emergency Communications (Emcomm)

- Packet Station Equipment
 - Antenna
 - Radio
 - Computer (Terminal)
 - MODEM (TNC)
 - Power Source

Ham Radio Emergency Communications (Emcomm)

- **Benefits of a Packet Radio NODE**

- Provides Error-Free printed messaging – Including FEMA ICS Forms
- Store & Forward BBS/eMail
- Communicates across inter-agency and inter-jurisdictional boundaries *
- On-demand Comms to Non-agency locations:
 - Schools, Hospitals, Emergency Shelters, Red Cross, CERT
 - Connect to other EMA agencies and MEMA (Mutual Aid)
- Comms Redundancy to Agency locations
 - Incident Command Sites, Police/Fire, Public Works, Utilities
- Connects to Internet/Global eMail through Winlink
- Other Digital modes available: Pactor, FLDIGI Suite of Programs

* A requirement of 9-11 Commission, incorporated into FEMA NIMS and ICS
